1982 VITAL STATISTICS REPORT

PREPARED BY:

DEPARTMENT FOR HEALTH SERVICES
DIVISION OF STATE HEALTH PLANNING
HEALTH AND VITAL STATISTICS BRANCH
FRANKFORT, KENTUCKY

INTRODUCTION

The 1982 Annual Vital Statistics Report was prepared by the Health and Vital Statistics Branch of the Division of State Health Planning, Kentucky's State Center for Health Statistics. This publication differs from the 1981 edition in both content and format. The 1982 report contains more detailed state, district, and county tables, most of which are now being computer generated, in addition to numerous graphs and maps which were not included in previous reports.

As in the past, all population data used in the report were obtained from the University of Louisville, Urban Studies Center. Any questions concerning these data should be directed to them.

All vital statistics data used to prepare this report were taken from certificates of birth, death, stillbirth, marriage, and divorce events which occurred in calendar year 1982 and were filed in the office of the Kentucky registrar of vital statistics prior to April 7, 1983. Vital events which occurred to residents of Kentucky while out of state that were reported to the office of the resistrar by May 31, 1983 were also included in the tables of resident events. As with all data obtained in this manner, there may be discrepancies in the information due to insufficient reporting. As in previous years, these discrepancies are most evident in marriage and divorce data.

There are variations in all statistics which are the result of chance. This characteristic is of particular importance in areas with small numbers of events where slight variations are proportionately larger in relation to the base figure. As an example, small changes in the number of births or deaths in small population areas could result in large changes in the birth or death rates. For this reason, we suggest that you use caution when comparing these rates to those of previous years.

The State Center for Health Statistics welcomes comments and suggestions on the content and format of this report. Additional information on vital events not found in this report is available upon request. Please address all requests, comments, or suggestions to:

SECTION A

1981 POPULATION STATISTICS

1981 POPULATION STATISTICS

The total population of Kentucky increased from 3,220,711 in 1970 to 3,660,777 in 1980, an increase of 13.7 percent. From 1980 to 1981 there was an estimated increase of 44,663, or 1.2 percent.

In 1981, Kentucky's population was 92.3 percent white and 7.7 percent nonwhite. Males made up 48.9 percent and females 51.1 percent of the total population. Slightly over 25 percent of the population was under 16 years of age and 11.3 percent was 65 years or older.

From 1980 to 1981, all districts experienced an increase in population, with Big Sandy having the largest increase (2.6 percent). Slightly over 45 percent of the total population resides in the Kentuckiana (21.8 percent), Bluegrass (15.0 percent), and Northern Kentucky (8.5 percent) districts.

In 1981, two counties, Gallatin and Robertson, had less than 5,000 population; thirteen counties had a population of 50,000 or more, with three of those counties, Jefferson, Kenton, and Fayette, having a population of over 100,000. Over 18 percent of the total Kentucky population resides in Jefferson county.

Oldham county experienced the largest increase in population, from 27,795 in 1980 to 29,030 in 1981 (4.4 percent). Fulton county had a population decrease of 0.8 percent, from 8,971 in 1980 to 8,898 in 1981, and Campbell county experienced a loss of 0.4 percent of it's population, from 83,317 in 1980 to 83,021 in 1981.

SECTION B

1982 NATALITY STATISTICS

1982 NATALITY STATISTICS

There were 56,462 resident live births in Kentucky in 1982, a decrease of 1.3 percent from 1981. The 1982 live birth rate was 15.2 per 1,000 population, compared to the national birth rate of 16.0[1]. As can be seen in Figure B-1, Kentucky's live birth rate has been declining for the last 30 years. District birth rates ranged from a high of 17.8 in Lincoln Trail to a low of 12.8 in Purchase. The highest county birth rate occurred in Christian county with 24.6 births per 1,000 population, while the lowest rate occurred in Lyon county with 7.2 births per 1,000 population.

In 1982, resident white births numbered 50,834 representing a 1.1 decrease from the 51,385 births in 1981. The birth rate of 14.9 per 1,000 white population in 1982 showed a 2.0 percent decrease from the 1981 rate of 15.2. Nonwhite births in 1982 were 5,628, a 3.4 percent decrease from the 5,827 nonwhite births reported in 1981. The nonwhite birth rate also decreased from a rate of 20.7 in 1981 to 19.6 in 1982.

Of the 56,462 resident live births in 1982, 51.1 percent were male and 48.9 percent were female, unchanged from the distribution occurring in 1981. Ninety percent of the live births in 1982 were white. The percentage of white births in 1981 was 89.8.

The Kentucky fertility rate for 1982 was 65.7 resident live births per 1,000 women aged 15-44 years, 2.1 percent below the 1981 rate of 67.8. In comparison, the national fertility rate was 67.8, a very slight increase over the 1981 rate of 67.4[2]. The 1982 teenage fertility rate for Kentucky was 34.3 live births per 1,000 women aged 10-19 years. Women aged 20-34 years accounted for 76.2 percent of the births in 1982 and 76.6 percent of the births reported in 1981.

Over 15 percent of the total resident births in 1982 were reported as illegitimate. Of the total white births, 11.7 percent were illegitimate compared to 53.0 percent of the total nonwhite births. These percentages varied by age group with 34.7 percent of total teenage births reported as illegitimate compared to 11.3 percent of births to mothers 20 years and older. A breakdown of teenage births shows that 62.3 percent of total white births to mothers under the age of 15 were illegitimate compared to 100 percent of total nonwhite births to the same age group. Of those babies born to mothers aged 15-19, 27.0 percent of total white births were illegitimate compared to 85.7 percent of nonwhite births to the same age group. The 1982 Kentucky illegitimacy rate was 158.3 per 1,000 total births, an increase of 2.9 percent from 1981, and a 76.3 percent increase from 1970.

In 1982, 38.1 percent of the resident live births were first-born children, compared to 38.6 percent in 1981 and 35.7 percent in 1970. The birth rate for first born children of 4.6 percent per 1,000 women aged 30-39 in 1982 showed a 64.3 percent increase from the 1970 rate of 2.8, indicating that more women are waiting later in life to start a family.

Prenatal care was received by 94.7 percent of all women having children born in 1982. Of that number, 76.1 percent received care during the first trimester of pregnancy. Those receiving no prenatal care was 1.5 percent; 3.9 percent did not report their prenatal care experience. Fewer teenage mothers received prenatal care in the first trimester, 55.6 percent, than mothers 20 years or older, 76.0 percent. Of those mothers of stillborn children, 79.5 percent had prenatal care, and 76.2 percent received care during the first trimester of pregnancy. Those receiving no care were 6.5 percent, with 15 percent not reported.

In 1982, 7.0 percent of all resident live births were premature or low-weight births (2500 grams or less). Infants of teenage mothers (8.8 percent) and mothers aged 40 and over (8.2 percent) were more likely to be low-weight births than infants born to mothers aged 20-39 (6.5 percent).

Resident live births for 1982 were delivered in hospitals 99.3 percent of the time, with 95.6 percent of the in-hospital births being attended by a physician and 3.7 percent being attended by midwives. Midwives attended 3.9 percent of all resident live births overall.

There were 503 resident stillbirths in 1982, a decrease of 10.7 percent from 1981. The stillbirth rate was 8.9 per 1,000 live births, a decrease of 9.2 percent from 1981 and a 52.7 percent decrease from 1950.

* RATE PER 1,000 1981 TOTAL POPULATION

SECTION C

1982 MORTALITY STATISTICS

1982 MORTALITY STATISTICS

In 1982, a total of 32,797 Kentucky residents died, a decrease of 1.4 percent from 1981. The death rate per 1,000 population decreased from 9.1 in 1981 to 8.9 in 1982. The national death rate was 8.6[1]. The Purchase area had the highest district death rate with 11.6 and Lincoln Trail had the lowest at 7.0. County death rates ranged from a high of 16.5 in Fulton county to a low of 4.0 in Bullitt county.

During 1982, the 30,290 resident deaths among the white race showed a slight decrease of 1.3 percent from 30,694 in 1981, while the 2,507 nonwhite deaths showed a decrease of 2.3 percent from the 2,566 deaths in 1981. The 1982 white death rate was 8.9 per 1,000 white population compared to the national rate of 8.8[2]. The nonwhite death rate was 8.7 per 1,000 nonwhite population compared to the national rate of 7.4[3].

The median age of death in 1982 was 72 years and has remained unchanged for the past four years. In 1970, the median age of death was 70 years, and from 1971 through 1977 it was 71 years.

The leading cause of resident deaths in Kentucky in 1982 continued to be heart disease, which accounted for 12,562 or 38.3 percent of all deaths. The ranking of the four most frequent causes of death -- heart disease, malignant neoplasms, cerebrovascular disease, and accidents -- has remained the same since 1950. The 1982 death rate for heart disease was 339.0 per 100,000 population, compared to the national rate of 327.8, followed by malignant neoplasms at 193.0 (national 188.1), cerebrovascular disease at 78.0 (national 68.9), and accidents at 47.1 (national 41.3)[4]. Influenza and pneumonia was the fifth leading cause of death with a 1982 rate of 22.6 per 100,000 population compared to the national rate of 21.8[5]. Ranked as the sixth leading cause of death was diabetes with a rate of 15.4 per 100,000 population, an increase of 17.6 percent from 1955. The 1982 national rate for diabetes was 14.3[6]. Suicide ranked as the seventh leading cause of death with a rate of 13.5 per 100,000 population, an increase of 40.6 percent from 1955. The national suicide rate in 1982 was 12.0[7].

The leading cause of resident deaths varied according to age group. For children under six years of age, 38.6 percent of the deaths were from certain causes in early infancy, 22.7 percent from congenital anomalies, and 12.0 percent from symptoms and ill-defined conditions. Accidents accounted for 63.3 percent of the deaths to persons 6-14 years of age, malignant neoplasms accounted for 8.8 percent, and congenital anomalies accounted for 6.1 percent. For persons 15-34 years of age, 47.6 percent of the deaths were from accidents, 13.8 percent from suicide, and 10.8 percent from homicide. For the age group 35-44, 23.2 percent of the deaths were due to malignant neoplasms, 22.4 percent due to heart disease, and 18.6 percent due to accidents. Slightly over 35 percent of deaths to persons 45-64 years of age were from heart disease, 34.0 percent from malignant neoplasms, and 4.8 percent from cerebrovascular disease. Heart disease was the leading cause of death to persons 65 years and older at 43.8 percent, followed by malignant neoplasms at 19.7 percent, and cerebrovascular disease at 11.1 percent.

Leading causes of resident deaths also varied according to race and sex. Of the ten leading causes, the 1982 death rate was higher among the white population for heart disease, influenza and pneumonia, suicide, and arteriosclerosis. Homicide was the fifth leading cause of death among the the nonwhite population compared to the eleventh cause for whites. Suicide ranked as the seventh leading cause of death among the white population, but ranked as the fifteenth cause for the nonwhite race. Males experienced a higher 1982 death rate for the ten leading causes than did females, with the exception of cerebrovascular disease, diabetes, and arteriosclerosis, for which females had the higher rate. Accidents ranked as the fourth leading cause of death with a total of 1,744, of which 68.1 percent were deaths to white males. Slightly over 49 percent of all 1982 accidental deaths were attributed to motor vehicles. While there has been an upward trend in motor vehicle deaths in recent years, the 1982 accidental death rate of 47.1 per 100,000 population was the lowest recorded over the past thirty years.

Deaths resulting from complications of pregnancy, childbirth, and the puerperium (maternal deaths) numbered five in Kentucky in 1982, a 16.7 percent decrease from the six deaths in 1981 and a 93.2 percent decrease from the 74 maternal deaths in 1950. The 1982 maternal death rate for Kentucky was the same as the national rate, 0.9 per 10,000 live births[8].

In 1982, there were 675 resident infant deaths, that is, deaths occurring under one year of age in Kentucky. The infant death rate of 12.0 per 1,000 live births showed a decrease of 66 percent from the 1950 rate of 35.3 and is the lowest ever recorded in Kentucky. The 1982 national infant death rate was 11.2[9]. Among white infants, the death rate decreased from 11.8 in 1981 to 11.4 in 1982, while for nonwhite infants the rate increased 6.9 percent, from 16.0 in 1981 to 17.1 in 1982. Of the 675 infant deaths, 65.6 percent were deaths under 28 days, or neonatal. The perinatal death rate was 7.8 per 1,000 live births compared to the national rate of 7.6[10]. The three leading causes of infant deaths were congenital anomalies, sudden infant death syndrome, and disorders relating to short gestation and unspecified low birthweight. These causes accounted for 312 infant deaths or 64.2 percent of all infant deaths in 1982.

SECTION D

1982 MARRIAGE AND DIVORCE STATISTICS

1982 MARRIAGE AND DIVORCE STATISTICS

There were 34,238 marriages in Kentucky in 1982, an increase of 6.3 percent from the 32,217 marriages occurring in 1981. The 1982 rate was 9.2 per 1,000 population, an increase of 4.5 percent from the 1981 rate of 8.8. The 1982 national rate for marriages was 10.8[1].

In 1982, the most frequent age at marriage was 18 years for the bride and 21 years for the groom. In 51.6 percent of the marriages both the bride and the groom were marrying for the first time; in 26.8 percent of the marriages, both the bride and the groom had been previously married.

Nearly 92 percent of the brides and 89.2 percent of the grooms that were married in Kentucky were residents of Kentucky. June was the most popular month for marriages in Kentucky, with 11.2 percent of the marriages occurring in that month. The least popular month was February, with 5.5 percent of the marriages taking place in that month.

In 1982, 16,215 divorces occurred in Kentucky, an increase of 103.2 percent from 1965. The 1982 divorce rate was 4.4 per 1,000 population, an increase of 69.2 percent from the 1965 rate of 2.6. Though the divorce rate was down this year, 4.3 percent from 1981, it has been climbing upward over the last several years, reaching its highest point in 1976 and 1980 with a rate of 4.7.

The highest 1982 divorce rate occurred in Hardin and Montgomery counties with a rate of 7.8 per 1,000 population. Franklin county had the highest divorce rate from 1971 to 1981, but dropped to fourth place in 1982 with a rate of 7.2 per 1,000 population. The 1982 national divorce rate was 5.1[2].

Nearly half of all divorces occurred in marriages of five years or less. Ten percent of all divorces occurred in marriages of 20 years or longer.

Slightly over 45 percent of the divorces involved no minor children; in 26.8 percent of the divorces only one minor child was involved.

APPENDIX

DEFINITIONS AND RATES

TOTAL BIRTHS: Live Births and Stillbirths.

LIVE BIRTHS: A live birth is the complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy, which after such separation, breaths or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.

STILLBIRTH (FETAL DEATH): Death prior to the complete expulsion or extraction from its mother a product of conception, having passed through at least the 20th week of gestation; the fetus shows no signs of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.

RESIDENCE: Usual place of residence for person to whom event occurred. For births and stillbirths, residence is defined as the mother's usual place of residence.

OCCURRENCE: Place where the event actually occurred.

RACE: Race of mother, father, or descendant is as stated on certificate. Race of child is determined from the race of the parents.

PREMATURE (LOW-WEIGHT BIRTH): Birth wherein the birth weight is equivalent to 2,500 grams or less (approximately 5 lbs., 8 oz.).

ILLEGITIMATE BIRTH: Birth wherein there is no marital tie between the mother and father.

INFANT DEATH: Death occurring to individual of less than 1 year of age.

NEONATAL DEATH: Death occurring to individual less than 28 days of age.

PERINATAL DEATH: Stillbirth or death under 1 week of age.

MATERNAL DEATH: Those deaths wherein the physician has designated a maternal condition as the underlying cause of death.

BIRTH RATE: Number of Resident Live Births X 1,000 divided by Total Resident Population.

DEATH RATE: Number of Resident Deaths X 1,000 divided by Total Resident Population.

AGE-SPECIFIC BIRTH RATE: Number of Resident Live Births for a Specific Age of Mother X 1,000 divided by Total Female Population of Specific Age.

PREMATURE BIRTH RATE: Number of Premature Births X 100 divided by Total Resident Live Births.

CONGENITAL ANOMALIES BIRTH RATE: Number of Congenital Anomalies X 1,000 divided by Total Resident Live Births.

ILLEGITIMACY RATE: Number of Total Resident Illegitimate Births X 1,000 divided by Total Resident Births.

STILLBIRTH RATE: Number of Resident Stillbirths X 1,000 divided by Total Resident Live Births.

INFANT DEATH RATE: Number of Infant Deaths X 1,000 divided by Total Resident Live Births.

UNDER 1 WEEK DEATH RATE: Number of Deaths Under 1 Week X 1,000 divided by Total Resident Live Births.

NEONATAL DEATH RATE: Number of Neonatal Deaths X 1,000 divided by Total Resident Live Births.

PERINATAL DEATH RATE: Number of Perinatal Deaths X 1,000 divided by Total Resident Live Births and Resident Stillbirths.

MATERNAL DEATH RATE: Number of Maternal Deaths X 10,000 divided by Total Resident Live Births.

AGE-SPECIFIC DEATH RATE: Number of Deaths in Specific Age Group X 100,000 divided by Total Resident Population in Specific Age Group.

MARRIAGE RATE: Number of Persons Married X 1,000 divided by Total Resident Population.

DIVORCE RATE: Number of Persons Divorced (including Annulments) X 1,000 divided by Total Resident Population.

FERTILITY RATE: Number of Live Births X 1,000 divided by Number of Women Aged 15-44.

FIRST BIRTH RATE: First Births X 100 divided by Live Births.

FOURTH & OVER BIRTH RATE: Fourth and Over Births X 100 divided by Live Births.

SYMBOLS: - means none, 0.0 means less than 0.05, and NA means not available.

CAUSE OF DEATH CODES

In tables C-7 and C-12, twenty selected causes of death are indicated. These 20 causes of death and the ICD-9 cause codes are as follows.

Cause of Death	I C D Codes
Heart Disease	390-398, 402, 404, 410-429
Malignant Neoplasm	140-208
Cerebrovascular Disease	430-438
Accidents	E800-E949
Influenza and Pneumonia	480-487
Diabetes Mellitus	250
Suicide	E950-E959
Arteriosclerosis	440
Cirrhosis of Liver	571
Certain Causes in Early Infancy	760-779
Homicide (includes Legal Intervention)	E960-E978
Arteries, Arterioles, Capillaries	441-448
Nephritis and Nephrosis	580-589
Congenital Anomalies	740-759
Emphysema	492
Hernia and Intestinal Obstruction	550-560
Septicemia	038
Symptoms and Ill-Defined Conditions	780-799
Hypertension	401, 403
Peptic Ulcer	531-537
